MAGNETICGRES

How does it work ??

This system is based on the magnetic force that exists between the two magnets which allow for quick and simple installation:

- 1) Unroll the metal foil on the subfloor;
- 2) Lay the first tile square that has a magnetc underside, at the crossing of the reference lines. For best results, lightly press the tiles.

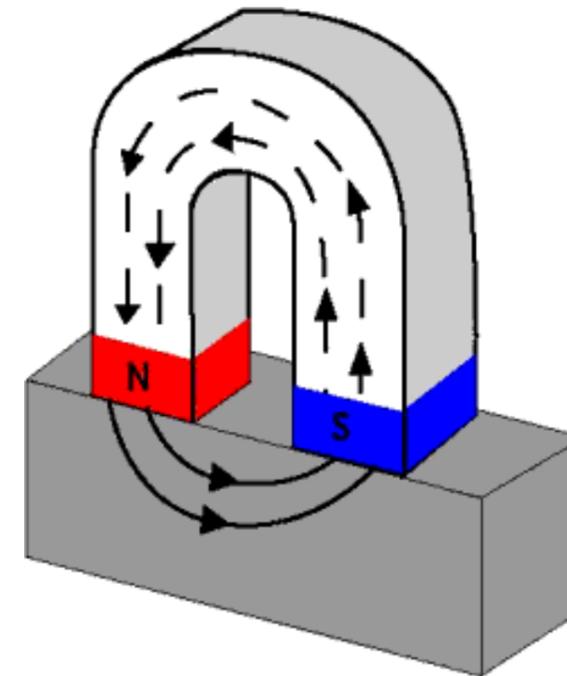

MAGNETICGRES

The joints between tiles are an important aspect of the tile project because they contribute to both its aesthetic appearance and its technical performance.

For that reason, each single tile of **MAGNETICGRES** has a perimeter special border that is already glued on each tile with the technical function of “joint” between the tiles.

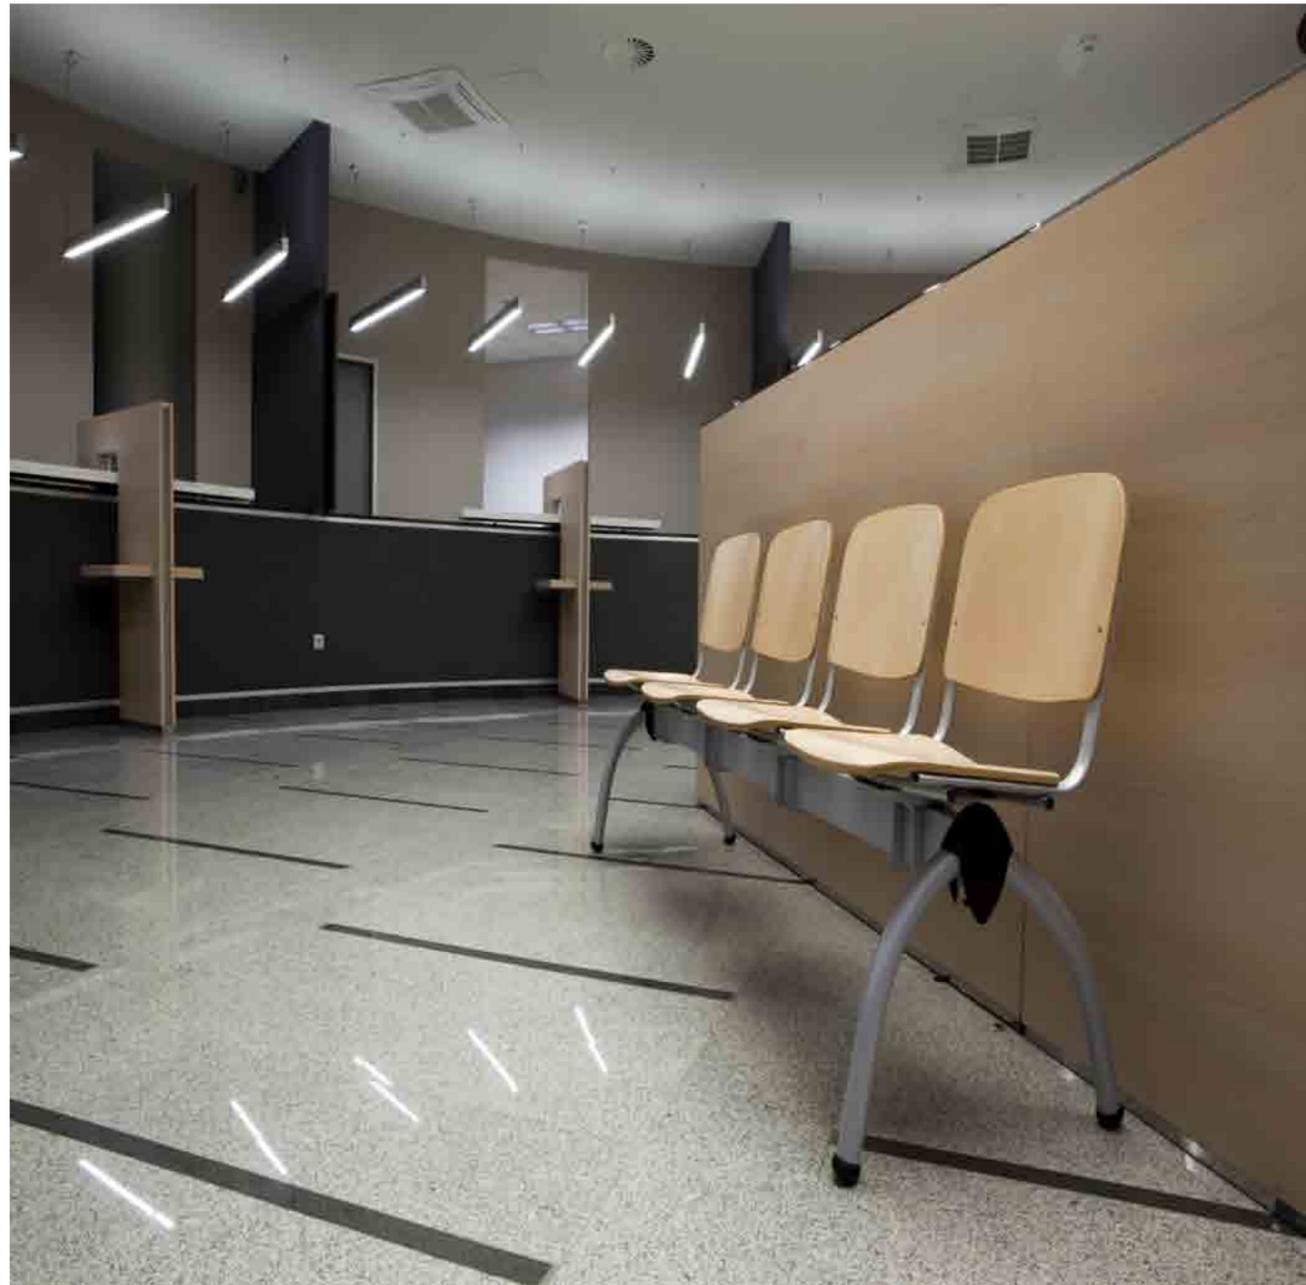

The magnetic force causes the magnets to attract one another, creating one single body.

Carefully read all instructions before beginning your tile installation. If you have any questions, please call us for assistance.
